

SPRING VEGETABLE GARDEN

Establishing your own spring vegetable garden is a a lot of fun, rewarding & overall a great idea.

Before you can begin planting you need to prepare the area you are going to use for your vegetable garden. Start by tilling the area you are planning to use and remove any clumps of grass. Or if you can till deeply you can incorporate the organic matter into the soil.

You are going to find that growing your first vegetable garden will be easier if you start with seedlings. If you do start with seeds, then you will want to start them indoors for about eight weeks before you plant them outdoors.

Planting your own spring vegetable garden can be great fun and very productive. You may even have vegetables that you can use in as little as four weeks. Make sure that you keep on top of the **spring vegetable garden** by pulling out any weeds and keep it well watered but not so that it becomes muddy.

If you would like or need help getting your vegetable garden going, give us a call at Nick Williams 1-818-222-7477

SOME OF NICK FAVORITES TO PLANT WITH GREATEST REWARDS

TOMATOES –Nick’s Number one choice ...A Tomato Garden
